

Statelog

Real-Time Digital Rights Infrastructure

Authorization decisions based on ownership, state and risk.

Traditional systems ask one question

WHO ARE YOU?

✓ Identity verified

But identity is no longer enough.

**Should this action be
allowed right now?**

Every request is evaluated in real time

Statelog Stateful Authorization Engine

```
graph TD; A[Statelog Stateful Authorization Engine] --> B[Digital Right Lookup]; A --> C[Ownership Validation]; A --> D[Risk Evaluation];
```

Digital Right Lookup

Does the right exist
and remain valid?

Ownership Validation

Is this user still the
rightful owner?

Risk Evaluation

Device, location and
policy signals.

Digital Right Lookup

Ownership Validation

Risk Evaluation

Decision

ALLOW

DENY

One Engine. Multiple Industries.

Physical Access

Digital Identity

Industrial IoT

Financial Services

Government

Ticketing & Mobility

Identity is not enough.

Ownership changes.

Authorization must happen in real time.
